

Introducing the game-changer in the printing industry: the cold foil machine mounted on an offset printing press. This innovative combination offers unmatched possibilities to improve your prints to the high quality and captivate your customers. Prepare to be amazed as your designs come to life with mesmerizing cold foil effects.

COLD FOIL PRINTING MACHINE

How does it work?

How does the cold foil machine integrated with an offset printing press work?

This powerful duo brings together the precision of offset printing and the brilliance of cold foil application.

As the offset press prints your design with exceptional clarity and color accuracy, the cold foil machine applies a layer of stunning foil, adding depth and eye-catching appeal to your prints.

Design Advantages

- Provides reflective surfaces with application in printing.
- Has the ability to hold textures such as linen-like surfaces.
- Applies cold foil that eliminates the need for opaque white.
- Can be used in many design applications due to production efficiency.
- Does not leave image shadows, e.g., on the back of magazine covers.
- Can be combined with UV printing for further advancements in printing.
- Creates an infinite color palette by printing on silver or holographic patterns.
- Enables cost-effective and value-added printing for professional differentiation.
- Offers flexibility in producing large, flat areas as well as fine details, halftones, and small fonts.
- Various silver, gold, and special or stock holographic patterns as well as transparent patterns are available.
- No deformation behind the printing layer (elimination of temperature/pressure effects compared to hot stamping).

Brand Advantages

- Offers strong value and cost ratio.
- Cost savings and fast entry into the market.
- Recyclable.
- Increased security options.
- No metal mold, no post-print foil application, no outsourcing.
- Expanded sales and marketing opportunities.
- Advanced printing provides clear product differentiation for marketers and retailers.
- Allows for the creation of unique surveillance labels with holographic images or patterns.
- Provides broader brand development opportunities :
Temperature-sensitive materials such as in-mold labels or shrink labels can be designed.

"A Dazzling Touch"

Printing Advantages

- Provides foil savings.
- Easy sample printing.
- Excellent printing control.
- Installation time is very short.
- Adjustable size for foil printing.
- Enables quick printing changes.
- Flexibility in designing changes.
- Multiple foil rolls can be installed.
- Requires limited operator training.
- Contributes to your company's economy.
- Suitable for both short and long print runs.
- Quick setup without the need for pre-tools.
- Offers foil application at offset printing speeds.
- Enhances your investment with value-added printing.
- Provides competitive advantage over other companies.
- Compatible with top printing, traditional ink, UV, and hybrid inks.
- Cold foil modules can be installed on offset printing machines.
- Post-print processing convenience (cold foil does not deform the substrate).
- Allows for foiling temperature-sensitive materials such as in-mold labels or shrink labels.
- Easy label application: even with large-area designs, there is no stretching of paper when transferring cold foils.
